

A Better Environment

Comtec Enterprises, and particularly its specialist datacentre eco-structure division Comtec Power, is strongly committed to contributing to the sustainable future of the environment through investments in efficient and intelligent means for conserving energy. The unnecessary consumption of fuels and electricity through all aspects of business activity heavily increase the emission of harmful gases such as carbon dioxide (CO₂), which in turn accelerate the onset of global warming.

The Comtec Carbon Offsetting Commitment not only reinforces our environmental values, but also allows us to make a direct and certifiable reduction in the carbon emissions of our customers, on their behalves.

THE COMTEC CARBON OFFSETTING COMMITMENT

A Tangible Benefit for Your Organisation

Whether your organisation proactively pursues corporate social responsibility goals for lower carbon emissions, or is driven to do so by impending legislation, it is inarguable that cleaner, greener business operations make significant business sense.

Invest in our business, and as well as providing outstanding consultancy, implementation and support services, we will commit to reducing CO₂ in UK government-approved schemes, *in your name*.

Government Approved CO₂ Reduction

Comtec has partnered with Equiclimite, a not-for-profit organisation and one of a handful of 'gold standard' UK government (DEFRA) approved carbon offsetting providers.

Through Equiclimite, Comtec purchases tonnes of EU CO₂ Allowances (EUAs) from the EU Carbon Trading Scheme on behalf of its individual customers, for every qualifying sale it makes.

Comtec Product/Service	Value of CO ₂ EUA Invested
12 month premium maintenance contract	2.5 tonnes
Purchase £15k+	5 tonnes
Purchase £100k+	25 tonnes
Purchase £250k+	50 tonnes
Purchase £500k+	100 tonnes
